

BALDI S.R.L.

www.baldisrl.com

Baldi Ideas and Solutions

Founded in 1981 by launching a strong forklift trucks and cleaning machine and products business, Baldi is now a major player in the field of cleaning and handling.

We manufacture a complete range of trailers for the separated collection of waste in hospital and industrial environments. We manufacture a series of trailers specifically for the cleaning and the maintenance of trains.

All our machines, the result of thirty years of experience at the service of companies and institutions, are characterized by efficiency, reliability and ease of use, allowing us to achieve great results even in the most challenging yards.

HAULERS

Ride-on and walk-behind

We have a wide range of very powerful overhauled, painted and newly wheeled electric tractors, ready for sale or rental. The "electric tractors with trailers" solution is tried and tested for transporting material, and is used in numerous rail yards, in multi-wing hospitals and in companies.

This system has many advantages, including:

- large cargo volumes, thanks to large capacity trailers
- capacity to tow up to 7000 kg.
- real time savings, with electric haulers and specially designed standard towable trailers

D
I

The range is completed by innovative walk-behind solutions, particularly interesting for handling in confined areas or areas with particular dimensions, such as hospital wards.

We also have high power industrial haulers, which are used in automotive companies for transferring the parts on the assembly line and in large industry, with a towing capacity of up to 3100 kg. and large diameter tyres.

FEATURES COMMON

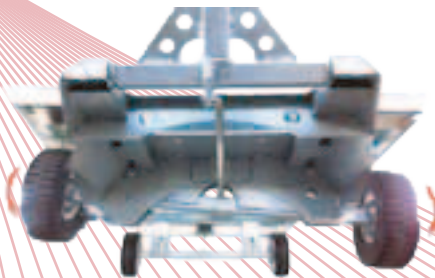

BASE CART Mod. ACR180

Galvanized steel cart with front steering axle on the recirculating ball fifth wheel coupling, sheaths for euro wheelbase forking, rear tow hook. Base module on which it is possible to install different types of structures to resolve the different transport problems.

TRILLER WITH SELF-LOCKING

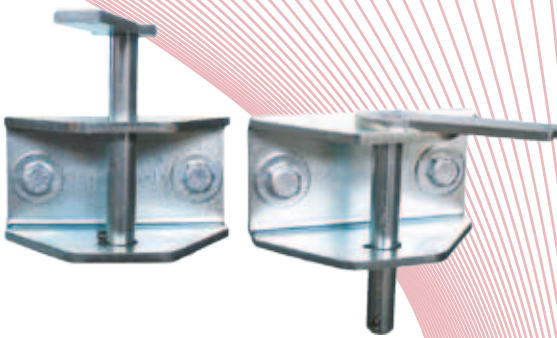

OSCILLATING FRONT AXLE

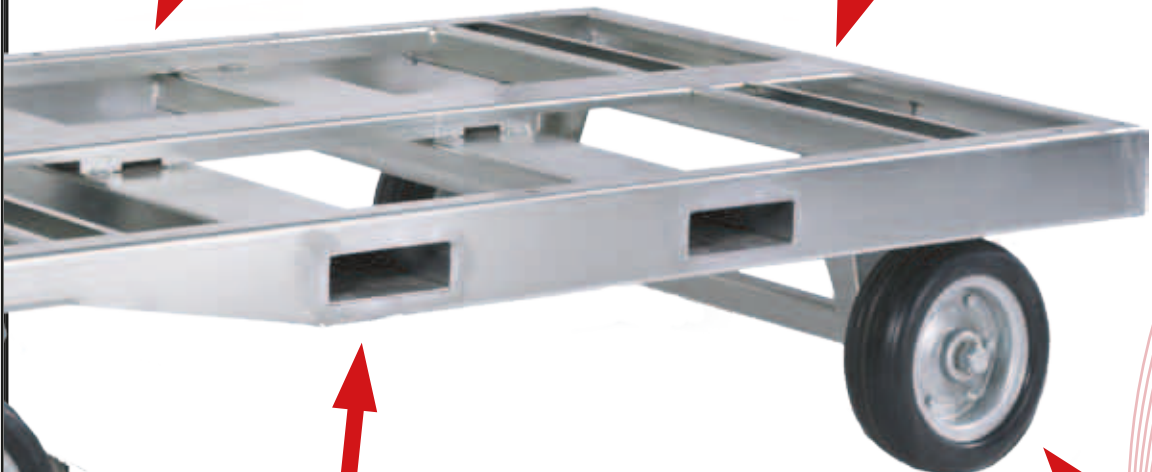

TO ALL THE TRAILERS

GALVANIZED STEEL FRAME

REAR ANTI-SLIPPING HOOK

FORKING SLOTS

LARGE DIAMETER SUPER ELASTIC TYRES

HOSPITAL SECTOR TRAILERS

Waste management in hospitals is an essential service that allows, if well designed, real savings of time and money. To achieve this important benefit, a complete system is needed to maximize safety by reducing the effort needed. It is also necessary for the system to be versatile and configurable according to the distinct characteristics of each hospital. For this, we have made trailers specially designed for hospitals, following the philosophy of true "separated collection". The electric tractor tows suitable trailers, even if hooked up in long lines, which do not make noise and can be forked and overturned in the appropriate hook lifts and compactors present in the ecological areas. This way, a single operator can perform the entire service.

Our solutions therefore allow optimization of the transfer and collection areas, making them visually attractive and hygienically safe. Mechanizing all operations reduces the effort and contact between operators and the waste itself. The system can be implemented totally or partially, and customized to be integrated with the methods already in use. Electric tractor, specific trailers and a forklift truck with a rotating plate are the necessary tools to make sure that the hospital in handling waste has a real source of pride that transforms the need into a resource.

OSP 180

Trailer for hospital waste

Designed to transport hospital waste, it has a capacity of 600 kg and can carry up to 24 special containers of 40 or 60 litres.

VTR 180

Trailer to transport windows

Trailer with STAINLESS containment tank, watertight to avoid any dripping during transport.

RSU 180

Solid waste transport trailer

The side horizontal axis openings aid loading, and the inclined wall aids the discharge of waste during the automatic emptying phase.

PGL 180 ALU

General transport trailer

Trailer for general transport of goods or waste, now even lighter with industrial aluminium sides.

FRM 180

Trailer for pharmaceutical material

Designed for safe transport of pharmaceuticals and medicines, FRM 180 is equipped with key locking, roof and short sides made of transparent lexan and preparation for internal shelves.

BOX 180

Container trailer

Is the "fully closed" version of the FRM 180 trailer. Enables safe and unobtrusive transport of any type of material.

DIA 130

Trailer for the transport of medical equipment

This special trailer allows the transport of electromedical equipment in total safety, reducing vibration. The rear wall becomes a lifting platform with minimum slope.

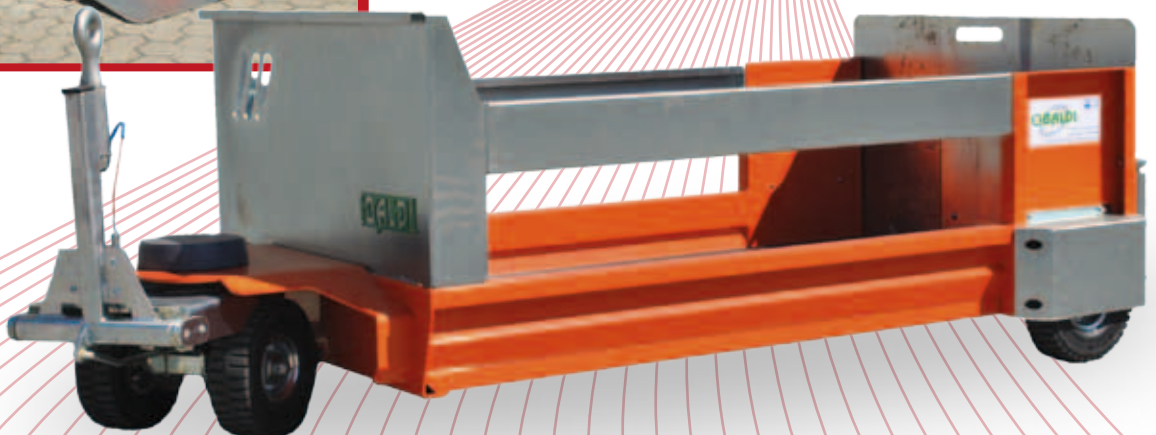

TRL 160

General low transport trailer

The close wheels significantly reduce the turning radius to move around easily, even in tight spaces.

MLT 180 S

Bag holder trailer

Designed for the transport of rubbish bags and, with an opening angle of 180°, with the possibility of fixing in an open and closed position. The upper crosspiece allows resistance to twisting due to the more disjointed crossings.

SEM 513

Self-propelled electric platform

Electric platform with walk-behind tiller steering designed for internal transport in the hospital, hotel and industrial sectors. Thanks to its ease of use, it does not require specialized staff, given the small size and light weight, it fits into stretcher lifts, hoists and lofts. The upper part of the frame can be equipped with various customized solutions to meet the demands of the customer.

SEM 513 AM3

DANE TECHNOLOGIES

M3HD

Pushers for trolleys QuickKart Dane Technologies systems are the most sold for the handling of any kind of shopping trolley in supermarkets.

- Tyres of large diameter
- Motor 36V
- Great autonomy
- Remote control with certification for airport environments

POWERPAL CM

The latest generation of the haulers stacker, specifically designed for the mechanized handling of Roll Container.

- Safe and ergonomic
- Motor 36V
- Built-in charger
- Extensive catalog of attacks to interface to any type of towing

ROLLBOX

Roll Containers for hospital

Wheeled containers for the preparation and handling of goods in hospitals. It stands out for its quietness and robustness, combined with his formidable capacity . The marking wheels leave no residues on floors, integrated handles facilitate movement. The system "all interlocking" also allows the installation of additional shelves quickly and easily. They shall be moved mechanically with the hauler Power pal 1000.

POWERPAL 1000

Hauler specifically for the hospital environment. It reduces the risk of accidents and labor costs; It is easy to use, simple, quiet and manoeuvrable. It equipped with built-in charger and hook multi-function adjustable.

RAILWAY SECTOR

For years we have designed and manufactured special trailers for the railway sector. These innovative towing solutions streamline the internal and external cleaning of locomotives and carriages, and considerably optimize the daily operations or periodic maintenance of the train. Our "working philosophy" involves the use of simple electric tractors that are cheap and versatile, which are always also available for rent, which also tow in series our equipped trailers. This solution allows you to use the electric hauler for different uses, minimizing the downtime that there would be if using dedicated electrical platforms. All our machines are designed with high quality components and can serve a complete team of operators in charge of cleaning trains, completely autonomously, without the need for water and electricity connections on board the tracks.

We also make machinery for special work, with unique characteristics that are adapted to the particular needs of the rail yards. We have developed a series of after - sales services, dedicated to the maintenance and monitoring of the machines, to ensure optimal safety levels and to protect the customer's investment over time. The installation of a "black box" made by us on board the most critical machinery allows you to receive a series of information to protect the safety of the operators and the equipment itself.

ASP 180

Turbine vacuum trailer

A powerful industrial vacuum, equipped with a 30 meter tube and special retractor. The vacuum pump allows the inclusion of additional black bags directly in the collection tank. The ASP 180 model can be used in complete autonomy thanks to the on board generator set.

ASP 200

Turbine vacuum trailer

PWR 200

Trailer with on board generator set and pressure washer

It is the core of the system. A powerful, super silenced generator feeds the pressure washer installed on board and the ASP 180 vacuum trailer simultaneously.

TNK 180

Water tank trailer

Wheeled 1000 lt. tank, can be used both to fill that collected from the train, and to feed the pressure washer on board the PWR 200 trailer. Equipped with an electric starter, it is available with an internal combustion engine or in an electric version. TNK AGG is a trailer with an added tank, to provide greater availability of water. TNK SEM is the self-propelled version of TNK 180.

TNK AGG

Trailer tank aggregate

TNK SEM

Self-propelled tank

SPG 220

Purging trailer

Fully made of stainless steel, SPG220 is a special trailer for emptying and purging of that collected. 1000 litre tank capacity. (700 lt. sludge compartment And 300 lt. clean water compartment)

IDR 702

Autonomous pressure washer

The 12V boiler allows you to work in absolute safety, even in the presence of 380V electrical currents. Equipped with a 1000 litre tank, combines high temperatures with a power up to 200 bar.

SPD 180

Autonomous pressure washer

Wheeled hot pressure washer, with 300 lt. capacity and 10 KW. generator set. Pressure of 160 bar.

IDR SLIM "AUTO"

Autonomous pressure washer

Practical and versatile cold pressure washer, allows high-pressure cleaning in the absence of water connections. Equipped with a 300 lt. tank and 10 mt. high pressure non-marking tube.

IDR SLIM

NBL 180

Nebulizer trailer for external case

The system also includes a wheeled nebulizer, operated by the operator directly from the electric tractor. The advanced dosing system ensures that the chemical does not come into contact with the pump, thus maximizing the duration, even in the presence of aggressive agents. The "185" version is equipped with an extension to cover the double floor and roof carriages.

NBL 185

Nebulizer trailer for external case

CLA X5-T2

Railway bogie drops

Railway bogie drops with movement along 4 lines. The excursion of the arm is from 35 to 144 cm, with a capacity of 20 q. The remote control allows use even away from the tiller.

SND 200

Sand delivery trailer

Trailer specifically designed for the distribution of sand. Electrically powered, it takes its energy from the electric tractor. A powerful integrated vacuum provides the operator optimum dust suppression.

CPF 180

Drum heated cart

Drum thermal heated cart for thick grease for railway use, allows special processes to be performed, even in the presence of low temperatures. 5° to 165° thermostat, loads the classic 210 lt. drums. (55 gallons).
